## PURPOSE

HUYAir Bio2 Prime | Biosafety Cabinet Class II, Type A2 with an optimal design. The entire working chamber is made of stainless steel (SUS 304) and is designed to ensure the safety of operators, samples, and the environment during work, scientific research, and experiments.

## TECHNOLOGY

Camfil filters - Sweden  
or AAF filters - USA

DC Centrifugal Fan  
EBMpapst - Germany

Touchscreen

- BlueTouch: HUYAir Bio2 Prime utilizes the "BlueTouch" touch-sensitive control system.
- Airflow Monitoring: The cabinet is equipped with sensors to directly monitor airflow rates and includes a low airspeed alert feature.
- Filter and UV Lamp Alerts: It provides alerts when the filters and UV lamps have reached the end of their service life.
- Safety Features: Safety features include automatic UV lamp shutoff when the cabinet is opened, door alerts when the glass is opened beyond 200mm, and motor reduction to 30% when the glass is completely closed for energy efficiency and prolonged motor life.
- EBMpapst DC Centrifugal Fan: The cabinet uses a powerful and energy-efficient DC centrifugal fan from EBMpapst in Germany, designed to minimize noise while ensuring efficient air circulation.
- Camfil or AAF Filters: It utilizes Camfil filters from Sweden or AAF filters from the United States, providing high-efficiency H14 filtration, capturing 99.999% of particles at 0.3 micrometers.

## DESIGN

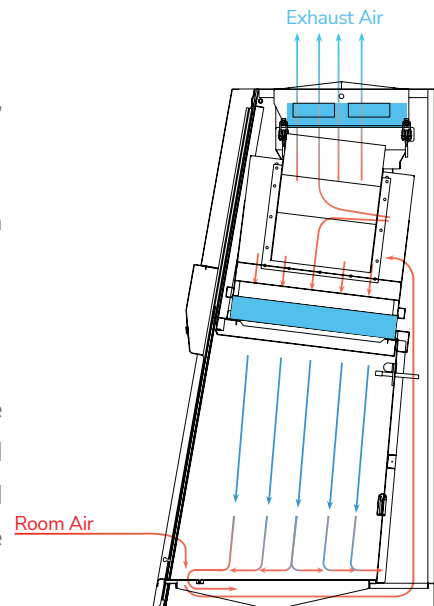

- The cabinet is designed with double walls and internal pressure to completely block and isolate toxic air.
- Special front and side ventilation grids are designed to provide optimal protection for users and products.
- The cabinet is easy to set up, operate, and maintain the filter.

## MATERIAL

- The outer shell is made of 1.2 mm thick galvanized steel, electrostatically painted to resist chemicals and UV.
- The inner chamber is made of 0.8 mm thick SUS 304 stainless steel.
- The door material consists of 5-10 mm toughened glass, designed with counterweights for easy lifting and lowering.

## AIR FLOW SYSTEMS

The surrounding air is drawn in through the front gap and the sides of the wall to create an incoming air stream. The incoming air flow is divided into two parts: 30% of the air flow will exit through the exhaust filter, and 70% of the air flow will be evenly distributed over the surface of the HEPA-grade filter, creating a downward vertical air flow.
